

The 75 trillion cells in your body are like little wet cell batteries that operate at a voltage of about 70 millivolts. Our cell membrane converts the earth's magnetic pulse into electrical potential energy, which helps our cells to recharge.

The ability of your cells to hold a charge depends on two things:

- Hydration of the tissues
- And the age or damage to the cells.

Hydration refers to whether you have enough healthy water and electrolytes in the area surrounding the cells. The age of the cell does not refer to your biological age, but rather the amount of wear and tear on the cells themselves. Your cells "batteries" needs to re-charge.

The conversion of the earth's magnetic pulse into cellular electrical energy helps our cells to function optimally by:

- Enhancing cell metabolism
- Oxygenation
- ATP production
- Overall absorption of nutrition and essential elements into the cell.
- Helping to remove wastes and toxins out of the cell

For our cells to function properly, we need the necessary supplies or building blocks. This consists of a clean working environment, and power to run all these functions. The quality of supply for your cell's nutrition affects the quality of your body.

For a clean working environment, you need to remove the toxins from your body. The power is the energy in our cells.

Our bodies are self-cleaning. There are six (6) self-cleaning mechanisms that work together as a team. Digestive tract eliminates stools, the kidneys eliminate urine, the skin eliminates sweat and the lungs/respiratory tract expel carbon dioxide and mucus. The lymph nodes eliminate allergens, viruses and bacteria.

The 'Captain of the Team' is the liver. When harmful waste come through, it chemically transforms these toxins, so all the other eliminative organs can excrete it. There is a natural law of the body, which is-the higher ratio of nutrients (plus re-energizing your cells) to toxins (i.e.: bad EMF's & Dirty-Electric Smog) creates an environment where your body can heal itself, hence the 'self-cleaning'. But if there is a higher ratio of toxins to nutrients, your body will become diseased.

When you have healthy cells, you have a healthier body.

A perfectly healthy body has the amazing ability to naturally maintain a steady supply of "power" to the cell. However, the stressors in today's world (surrounded by Bad EMF's, Dirty Electric Smog) prevent or block the natural flow or "recharging power" to our cells. PEMF can 're-charge' your cell's batteries.

Pulsed Electromagnetic Fields (PEMF) acts like the earth's magnetic pulse. It creates a pump for your cells and promotes cellular exercise by stimulating cells and tissue by increasing cellular voltage through the outer cell membrane.

Pulsed magnetic frequencies act like a whole-body battery recharger by pumping and priming your cells. Because of this, the cells ability increases to accept necessary oxygen and nutrients and helps rid of damaging toxins. Without this energy the cell voltage weakens, and disease and illness set in. When cells have a buildup of toxins and cannot obtain the nutrients they need for survival, they begin to die. This is when a person begins to feel pain, fatigue, and disease can ensue.

The importance of Pulsed Electromagnetic Field Therapy:

Through all the great natural healing modalities that are available, nutrition, chiropractic, laser therapy, massage, essential oils, etc., the primary stumbling block has always been maintaining our energy level.

One person may try a natural therapy and see great results the first week. Another may take weeks or months to see results. Often the difference between the two is the level of energy inside the cell needed to make the repair.

Pulsed Electromagnetic Field (PEMF) creates cellular exercise by:

- Increasing your cells electric membrane potential
- Helps to receive charge and hold it like a small electrical battery

Expectancy of PEMF

- **It's Not a Panacea** - If your body is deficient of Magnesium, all the PEMF in the World will not give you Magnesium (Proper Nutrition & Good supplements to help aid in the deficiency)
- **It's NOT Instant Gratification** ~ You will NOT be instantly healed (Your cells will take time to restore and heal)
- **You may not feel anything** (It's like Oxygen, you can't feel Oxygen, but you know it's working)
